

## Agenda: Mentor Check-in #2

### Achieved Milestones

- User authentication
- Map functionality showing deeds
- Kudos exchange with deeds
- User profiles

### Difficulties Encountered

- Deadlines were missed causing last minute work
- Frequent blockers
- Work not distributed equally

### Changes to Design/Project Plan

- Profile now has a list of deeds someone requested and they offered help in
- No search bar
- No list view of deeds
  - My Deeds page instead

### Open Questions

- Regeneration of kudos - reward system
  - Give kudos to users on a weekly/monthly basis? How much?
- Phone verification - could be a stretch goal for improved safety
- Negotiation of kudos rewarded for deeds
  - What happens if: helper feels that given the description the deed should be worth more kudos
  - What happens if: requester sets "low" difficulty but afterwards the helper feels the difficulty was higher
  - **Our opinion:** Feedback system should be provide enough safety for future interactions with a bad actor
    - Also, will add mechanism for requester to finalize difficulty and actual hours spent on deed right after they mark the deed complete
- Reward system
  - What rewards should we have?
    - Example rewards: in-app rewards like discounted deeds, bus/train ticket, gas and electricity reimbursements
  - What should it look like? Do we need to build a mechanism for creating rewards?
    - Or pre-defined list of rewards
